- Teamwork skills

PROFILE

Information Technology student with a passion for front-end development and a portfolio of modern web applications built with React.js, Next.js, and Tailwind CSS. Skilled in translating Figma designs into responsive, high-quality code. Brings strong analytical and troubleshooting abilities from IT support experience, ensuring a thorough and detail-oriented approach to development. Ready to contribute to and grow with a forward-thinking team.

RELEVANT PROJECTS

Internship at Department of Science and Technology

Syncko : February 2025 – June 2025

Role: Frontend Developer **Tools:** Next.JS , Tailwind CSS & Javascript libraries, Chart Js, Rechart Js

knowledge management portal designed to facilitate easy access, sharing, and organization of knowledge resources within an organization. The platform focuses on training material sharing, enabling employees to upload materials after specific training sessions and providing progress tracking with restore points.

Capstone Project

Rabassadorsogon : November 2024 – January 2025

Role: Frontend Developer **Tools:** React.JS , Tailwind CSS & Javascript, Node Js, MySQL and Javascript UI libraries(Shadcn & HeroUI)

A capstone project tourism website designed to enhance user experience with key features including a trip planning tool, an integrated chat system for real-time communication, and a comprehensive booking system. This a capstone project aims to streamline the travel planning process and provide users with all the essential tools for a seamless travel experience.

Contractual Project from Idea Venture Studio

Unity Trials: August 2025–September 2025

Role: Full Stack Developer **Tools:** Contentful (Headless CMS), CSS, Next.js, Nest.js, Docker, Algolia, MongoDB, and AWS.

The Unity Trials project involved a complete redesign and deployment of a high-quality, fully functional website within an 80-hour contractual period, focusing on significant UI/UX improvements and optimized data retrieval. Key responsibilities included ensuring the continuous functioning of Algolia search for trial navigation and its bi-weekly generation of condition pages, alongside maintaining reliable data updates from ClinicalTrials.gov to MongoDB and ensuring its critical connection to Algolia. Measurable site speed improvements were achieved and validated, while all existing site functionalities and content integrity were safeguarded against AI modifications. Strategic client discussions about Contentful and comprehensive SEO enhancements, including updated title tags and meta descriptions, were also integral to the project.
